(54) FACSIMILE EQUIPMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To secure the secrecy of confidential transmission and to improve availability by adding a calling source telephone number non-notification number to the opposite party telephone number to send when it is connected to a line that offers a calling telephone number notification service and confidential communication is performed.

SOLUTION: In facsimile equipment 1 at the time of transmission, a CPU 12 checks whether transmission is confidential or not on an operation displaying part 2 with the existence of an instruction operation of confidential transmission and adds a control number (sending ID non-notification number) which rejects the notification of a calling source telephone number before a calling number that is the facsimile number of an opposite sending party through a calling ID signal controlling part 10 at the time of confidential transmission. The CPU 12 sends the opposite party telephone number to which the control number that rejects the calling source telephone number is added to make a call out, performs sending control with a normal facsimile procedure when the opposite party responds and performs facsimile sending. When it is not confidential transmission, the control number that rejects the notification of a calling source telephone number to the facsimile number of an opposite sending party is not added and normal facsimile sending is performed.
